### "Narita Gammas"

List of strong gamma-rays emitted from radionuclides

by T. Narita and K. Kitao

Documentation of the PC diskette

by H.D. Lemmel

**Abstract:** The PC diskette containing the "List of strong gamma-rays emitted from radionuclides" as published by T. Narita and K. Kitao in the report JAERI-M-92-051, is described. The diskette is available from the IAEA Nuclear Data Section, costfree, upon request.

## **"Narita Gammas"**

### **List of strong gamma-rays emitted from radionuclides**

by T. Narita and K. Kitao

The PC diskette contains one text file "GAMMATBL" of 526.334 bytes. The text file is a page-by-page image of the listing contained in the report JAERI-M-92-051 by Tsutomu Narita and Kensuke Kitao, JAERI, Japan.

Some introductory pages from this report are attached.

The tabulation includes the columns: energy, intensity, parent nuclide, decay code, half-life, no. of G, energies and intensities of two other intense gamma-rays.

List of Strong Gamma-rays Emitted from Radionuclides

Tsutomu NARITA and Kensuke KITAO\*

Department of Physics  
Tokai Research Establishment  
Japan Atomic Energy Research Institute  
Tokai-mura, Naka-gun, Ibaraki-ken

(Received March 2, 1992)

This is a compilation of intense gamma-rays, with energy value greater than 1 keV, emitted from decay of radioactive nuclides. These gamma-rays are three strongest of gamma-rays originating from each radionuclide. These gamma-rays are listed in the order of increasing energy. The table contains the energy and the intensity of the gamma-rays, the parent nuclide, the decay mode and the half-life of the parent nuclide and the total number of gamma-rays originating from the nuclide, and is also accompanied with energies and intensities of other two of the three gamma-rays in the same row. The list can be used as a quick guide to identify radionuclides in gamma-ray spectrometry. An annex contains the list of radionuclides having no measured gamma-ray intensities, together with energy values of the gamma-rays. The numerical values given in the list are taken from the values adopted in the Evaluated Nuclear Structure Data File (ENSDF) maintained by the National Nuclear Data Center at Brookhaven National Laboratory, as of February 1991. The list has also been prepared on a floppy diskette.

Keywords: Gamma-rays, Radioactive Nuclide, Gamma-ray Energy, Gamma-ray Intensity, Decay Mode, Parent Nuclide, Half-life, ENSDF
